## LEVERAGE NEXT-GENERATION NETWORK CONNECTIVITY

**With the ever-changing environment, businesses are having to adapt to meet the needs and demands of their industry, employees and customers. With these challenges being critical to your business success, the need to ensure your network and infrastructure is agile and robust is essential.**

**We are intelligent network experts providing businesses with the foundations to accelerate their digital transformation strategy.**

In this guide, we share the importance of a reliable network. Working with Cisco we work in partnership with customers to listen, consult, and innovate ultimately delivering the right technology to maximize return on investment.

Meraki

## THE IMPORTANCE OF A RELIABLE NETWORK

Your network is the bedrock for the success of your technology strategy. From this strong foundation you have the security capabilities to support other technology. If your network is unstable, everything that is built on top will be on shaky ground, hindering your ability to digitalise your business.

Today, security threats are becoming more and more sophisticated therefore it is key that businesses ensure their network is safe and secure. One fault in your network could result in downtime which increases the risk of a security threat.

**Do not** neglect your network, it can be the make or break factor in transforming your business and helping it to thrive.

## WHY CONSIDER A CISCO MERAKI NETWORK?

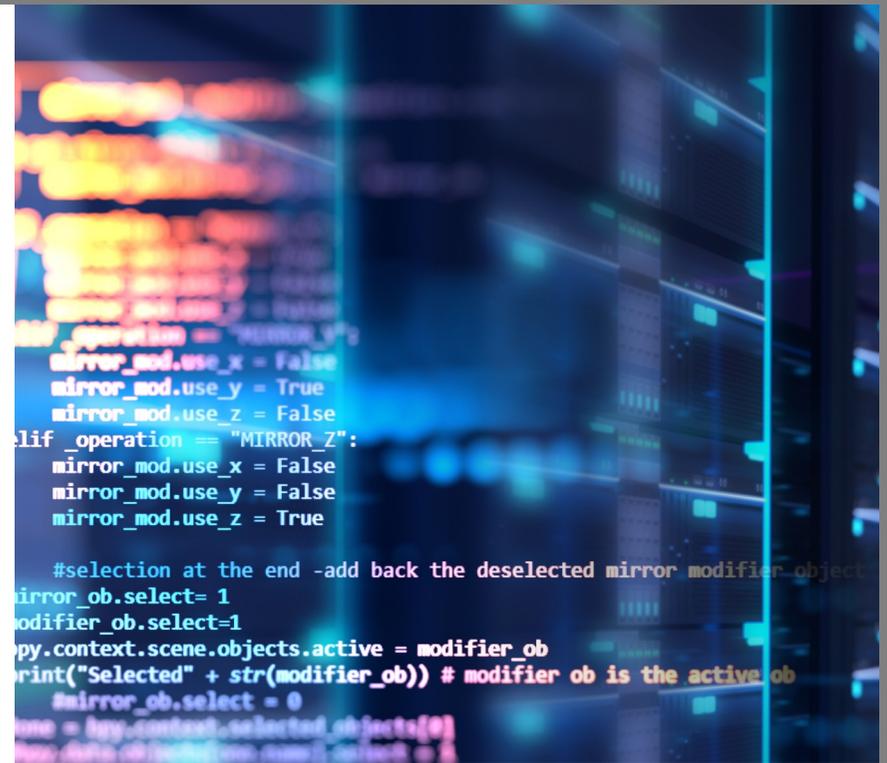

Working with Trust to deploy a Cisco Meraki network will digitally transform your connectivity capabilities as well as enabling your business to reap the benefits of a leading network, which include:

### Easily Manage and Scale

Manage your network via one centralised and intuitive cloud-based dashboard. Have the ability to review analytics to monitor how your Enterprise WiFi is being used across all your locations. As well as this you will be able to launch new initiatives or optimise existing WiFi networks quickly. A cloud-based approach means there is no need to install additional software or hardware therefore, minimising management time and costs. Furthermore, it's easy to scale in line with your business's needs, ensuring your network grows with you while still maintaining its security and performance levels.

### Security

Ensuring your network is safe and secure should be one of your top priorities. Any data which travels through is encrypted for an added layer of protection. As well as this you will be able to identify and manage any incident quickly as the system will alert you at the first sign of a threat.

### Next-Generation WiFi

Cisco Meraki networks provide the latest cutting edge technology, it ensures that the reliability, performance and speed is delivered to allow you to provide a next level network to digitally transform your business.

### Access Anywhere, Anytime

Cisco Meraki is a cloud-based network allowing you to access the Meraki dashboard anywhere at anytime. With the move to home working becoming more popular, it's important to be able to access solutions remotely with the ability to enhance employee experience, productivity and security.

# THE BENEFITS OF OUR MANAGED ENTERPRISE WIFI NETWORKS

Having the ability to deliver an enriched experience to your employees and customers is easy with a Cisco Meraki solution and our expertise in Enterprise Networks. With a simple WiFi logon, the capabilities to capture the attention of your audience with smart content has never been so simple.

We work closely with our customers to understand their business requirements, needs and aspirations. We wrap our solutions and services around with a managed service, meaning that our team are proactively monitoring and are at your service with our 24/7/365 customer service desk team. We offer proactive network monitoring, remote management, user and credential management and troubleshooting.

We have deployed and manage Cisco Meraki LAN and WiFi infrastructures to provide a powerful, robust, efficient and flexible network. For example, 13,000 devices across 5 counties for a retailer.
